Site is a land / water interface with what is perceived as a bridge-like structure and other structures. There is a large cavernous building at the site. Inside, there are pungent chemical odors, the sound of heavy equipment moving about, and echoes produced because of the size of the building. There are cylindrical, unstable (unwieldy) and heavy. There ~~are~~ also tracked vehicles. Ambience of buildings suggest preparation for invasionary activity. It is ~~apparent~~ perceived as a warehouse-type building used to stockpile equipment.

There are also long, silvery cold smooth cylindrical objects (separate from those described above) that produce a sensation of ~~being~~ ~~movement~~. Airburst like projectiles (aircraft missiles).
